Cedric Erdelen

Rust Software Engineer

cedric.erdelen@gmail.com | GitHub | LinkedIn

SKILLS

Programming Languages: C/C++, Rust
DevOps: Git, CI/CD Pipelines, Docker, Subversion
Database Management: SQL, PostgreSQL
Project Management: Agile Methodologies, Scrum, Jira, Confluence
Languages: German (native), English (C2), Spanish (B2)

EMPLOYMENT HISTORY

RUST SOFTWARE ENGINEER / TECHNICAL LEAD, FERCHAU May 2025 – Present

Tech-Stack: Rust

Leading the technical design and implementation of communication system abstractions, developing reusable and high performance API to unify diverse workflows. Focusing on modular architecture, robust interface design and performance optimizations ensuring seamless system interoperability and scalability.

Leading the team as a technical Lead since february 2026.

SOFTWARE ENGINEER, ACTIA IME December 2023 – January 2025

Tech-Stack: modern C++, Rust, Embedded Systems

Worked with and implemented various communication protocols (e.g., TCP, UDP, DoIP, CAN) to enable efficient data exchange between systems. Another high priority was multithreading to optimize performance and ensure the scalability of the software.

SOFTWARE ENGINEER TUTOR, 42 WOLFSBURG February 2023 – November 2023

EDUCATION / OPEN SOURCE CONTRIBUTIONS

OPEN SOURCE CONTRIBUTER April 2025 – Present

Alongside full time employment I am actively contributing to various open source rust projects in the systems and infrastructure space, implementing new features, solving bugs, improving reliability of core libraries / utilities and extending test coverage.

42 WOLFSBURG October 2021 – January 2023

Software Engineering

The school "42 Wolfsburg" is an innovative institution for software engineering with a project-based, peer-to-peer learning approach. The completion is certified with the RNCP 6.0 by the French government, which corresponds to the level of a Bachelor's degree. Practical projects include:

- Writing my own shell for the terminal, implementing command parsing and process handling.
- Developing a web server capable of handling multiple clients simultaneously without blocking, showcasing non-blocking I/O principles.
- Building a full-stack website, including frontend design, backend logic, and database management.
- Working with Docker to containerize applications, ensuring portability and scalability.
- Administering Linux systems, gaining hands-on experience in system management, networking, and automation.
